

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (Currently Amended). Water-soluble supramolecular self-assemblies of a polyelectrolyte ~~comprising~~ **consisting essentially of:**

at least one polyelectrolyte compound selected from the group consisting of

a. diblock copolymers ~~including~~ **wherein one block is composed of monomers which include either ionizable units, or charged units, or mixtures of ionizable and charged units, in combination with distinct monomers that include non-ionic hydrophobic units,**

b. multiblock copolymers ~~including~~ **wherein at least one block is composed of monomers which include either ionizable units, or charged units, or mixtures of ionizable and charged units, in combination with distinct monomers that include non-ionic hydrophobic units, and**

c. random copolymers with grafted hydrophilic and non-ionic oligomers or polymers, **wherein said random copolymers including are composed of monomers that include either ionizable units, or charged units, or mixtures of ionizable and charged units, in**

Other blocks
not included
and/or containing

multiblock
copolymer

This is

multiblock
copolymer

combination with **distinct monomers that include** non-ionic hydrophobic units;

wherein a polyelectrolyte segment forms a core of the assembly and chemically bears non-ionic hydrophobic repeating units.

active site *what is this*

Claim 2 (Previously Amended). The supramolecular self-assemblies of claim 1, wherein:

said diblock copolymers include at least two blocks, one of which is hydrophilic and uncharged and another of which contains at least one repeating unit selected from ionizable or charged units in combination with non-ionic hydrophobic units.

Claim 3 (Previously Amended). The supramolecular self-assemblies of claim 2, wherein:

said ionizable units are repeating units that can be transformed from a non-ionic to a charged state.

Claim 4 (Previously Amended). The supramolecular self-assemblies of claim 3 wherein:

transformation to a charged state is caused by a change in pH or conduction of a chemical reaction.

Claim 5. Cancelled

Claim 6 (Previously Amended). The supramolecular self-assemblies of claim 2, wherein:

said ionizable or charged block, bearing hydrophobic repeating units, is synthesized from at least one hydrophobic compound selected from the group consisting of vinyl monomers, vinyl oligomers, and vinyl polymers.

Claim 7 (Previously Amended). The supramolecular self-assemblies of claim 6, wherein;

said hydrophobic compound is at least one compound selected from the group consisting of acrylates, acrylamides, alkylacrylates, alkylacrylamides, arylacrylates and arylacrylamides.

Claim 8 (Previously Amended)). The supramolecular self-assemblies of claim 7, wherein:

said hydrophobic compound includes at least one aliphatic or aromatic moiety selected from the group consisting of methacrylates and methacrylamides.

Claim 9 (Original). The supramolecular self-assemblies of claim 6, wherein:

said hydrophobic compound is at least one vinyl-terminated biodegradable polyester.

Claim 10 (Canceled).

Claim 11 (Previously Amended). The supramolecular self-assemblies of claim 2, wherein:

said ionizable units include at least one compound selected from the group consisting of alkylacrylic acids, (aminoalkyl)acrylates, and (aminoalkyl)alkylacrylates.

Claim 12 (Original). The supramolecular self-assemblies of claim 2, wherein:

said hydrophilic block is synthesized from at least one hydrophilic compound selected from vinyl monomers, vinyl oligomers and vinyl polymers.

Claim 13 (Previously Amended). The supramolecular self-assemblies of claim 12, wherein:

said hydrophilic compound is at least one compound selected from the group consisting of acrylates, acrylamides,

alkylacrylates, alkylacrylamides, and N-vinyl-2-pyrrolidones.

Claim 14 (Original). The supramolecular self-assemblies of claim 2, wherein:

said hydrophilic block originates from a macroinitiator based on poly(ethylene glycol) or poly(N-vinyl-2-pyrrolidone).

Claim 15 (Withdrawn). A pharmaceutical formulation comprising supramolecular self-assemblies of claim 1 in combination with an effective amount of at least one pharmacological constituent.

NE
Claim 16 (Withdrawn). The pharmaceutical formulation of claim 15, wherein the pharmacological constituent is a drug.

Claim 17 (Withdrawn). The pharmaceutical formulation of claim 15, wherein the pharmacological constituent is a peptide, protein or genetic material.

Claim 18 (Withdrawn). The pharmaceutical formulation of claim 15, including a targeting ligand.

Claim 19 (Canceled). Water-soluble supramolecular self-assemblies of a polyelectrolyte comprising:

at least one polyelectrolyte compound selected from the group consisting of

a. diblock copolymers including at least two blocks, one of which is hydrophilic and uncharged and another of which contains at least one repeating unit selected from ionizable or charged units, or mixtures of ionizable and charged units, in combination with non-ionic hydrophobic units ionizable units, wherein said ionizable or charged block, bearing hydrophobic repeating units, is synthesized from at least one hydrophobic compound selected from the group consisting of vinyl monomers, vinyl oligomers, and vinyl polymers, and said hydrophobic compound is at least one vinyl-terminated biodegradable polyester selected from the group consisting of vinyl-terminated poly(lactide) and vinyl-terminated poly(ϵ -caprolactone);

b. multiblock copolymers ionizable units, or charged units, or mixtures of ionizable and charged units, in combination with non-ionic hydrophobic, and

c. random copolymers with grafted hydrophilic and non-ionic oligomers or polymers, said random copolymers including ionizable units, or charged units, or mixtures of ionizable and charged units, in combination with non-ionic hydrophobic units;

Appl. No. 09/877,999 Amdt. dated Dec. 11, 2003 Reply to Office action of Sept. 15, 2003

wherein a polyelectrolyte segment forms a core of the assembly and chemically bears non-ionic hydrophobic repeating units.
